Returning to School After a Crisis
A Guide to Addressing Traumatic Events at School
The National Center for School Safety (NCSS) is a Bureau of Justice Assistance-funded training and technical assistance center at the University of Michigan School of Public Health. As a multidisciplinary, multi-institutional center focused on improving school safety and preventing school violence, the NCSS team is composed of national leaders in criminal justice, education, social work, and public health with expertise in school safety research and practice. NCSS provides comprehensive and accessible support to Students, Teachers, and Officers Preventing (STOP) School Violence grantees and the school safety community nationwide to address today's school safety challenges. NCSS serves as the national training and technical assistance provider for the STOP School Violence Program.

This guide is intended as a resource that teachers and other school personnel can use to help students cope with the aftermath of a school shooting or other traumatic events. The goals of this resource are to:

- Identify best practices in discussing traumatic events with students
- Outline steps for having conversations about traumatic events with students
- Describe strategies to manage stress and trauma responses

This guide contains information about spotting common warning signs of a mental health crisis or trauma, stress management techniques, and strategies for supporting students following a crisis.

Although this guide is intended mainly for school staff, we have included a brief student resources handout at the end that can be distributed to students and their families.

### Contents

1. Common trauma responses  
4. Warning signs of risk for suicide or mental health crisis  
5. Talking with students the first day back  
6. Supporting students after the event  
7. Stress management techniques  
9. Using restorative practices  
10. Crisis and mental health resources  
11. Student resources

### Overview

Following a crisis like a school shooting, students and community members in the surrounding area are likely to experience a trauma response. Students in surrounding communities may experience vicarious trauma or secondary traumatic stress. Although their healing journeys may look different, this guide provides lessons learned from previous school shootings, strategies teachers can use to discuss these events with their students, and shares strategies and resources that can be used to help students cope with their trauma response.

### Definitions

**Vicarious trauma:** a negative reaction to trauma exposure

**Secondary traumatic stress:** the emotional duress that results when an individual hears about the firsthand trauma experiences of another
Common Trauma Responses

Reactions to trauma can be immediate or delayed. Responses may differ in severity and can include a wide range of behaviors and responses, sometimes influenced by culture.

Factors that may make people more sensitive to trauma include:

- Direct involvement in the trauma
- Severe or prolonged exposure to the event
- A personal history of prior trauma
- A family or personal history of mental health concerns
- Limited social support
- Ongoing life stressors
Below are some common responses to trauma by age group. Please note that reactions to trauma can be immediate or delayed, and may differ in severity. Responses to trauma may include a wide range of behaviors and responses.

**Children age 5 and younger may:**

- Cling to parents or caregivers/ exhibit separation anxiety
- Cry and be tearful
- Have tantrums and be irritable
- Complain of physical problems such as stomachaches or headaches
- Lack developmental progress
- Suddenly return to behaviors such as bed-wetting and thumb sucking/ regression in previously mastered stages of development
- Show increased fearfulness or development of new fears
- Over or under react to physical contact or sounds
- Make statements and ask questions about dying and death
- Experience difficulty with sleep (nightmares, avoid sleep, frequent waking up)
- Recreate the traumatic event (repeated talking about, “playing” out or drawing the event)

**Children age 6 to 11 may:**

- Have problems in school or changes in academic performance
- Experience anxiety, fear, and worry about the safety of self and others
- Show increased distress (unusually whiny, irritable, moody)
- Isolate themselves from friends and family or withdraw from others and activities
- Have nightmares, refuse to go to bed, or experience other sleep problems
- Become irritable, angry, or disruptive
- Be unable to concentrate
- Complain of physical problems such as stomachaches and headaches
- Develop unfounded fears
- Lose interest in fun activities
- Have decreased attention and/or concentration
- Experience an increase in activity level
- Over or under react to physical contact or sounds
- Experience difficulty with authority, redirection, or criticism
- Recreate the traumatic event (repeated talking about, “playing” out or drawing the event)
- Experience hyperarousal (tendency to be easily startled)
- Display emotional numbing (seeming to have no feeling about the event)
Adolescents age 12 to 17 may:

» Re-experience the trauma (nightmares or disturbing memories during the day)
» Have changes in academic performance
» Use or abuse drugs, alcohol, or tobacco
» Be disruptive/disrespectful or behave destructively
» Complain of physical problems such as stomachaches and headaches
» Become isolated from friends and family
» Be angry or resentful
» Lose interest in fun activities
» Feel guilty for not preventing injuries or deaths
» Have decreased attention and/or concentration
» Increase in activity level
» Show an increase in impulsivity, risk taking behavior
» Experience anxiety, fear, and worry about safety of self and others
» Withdraw from other or activities
» Be irritable with friends, teachers, events
» Have angry outbursts and/or aggression
» Over or under react to physical contact or sounds
» Repetitive thoughts about death or dying
» Experience hyperarousal (tendency to be easily startled)
» Display emotional numbing (seeming to have no feeling about the event
» Have changes and/or problems with sleep and appetite

Children and adolescents may experience different reactions to trauma and grief. If symptoms continue to persist, behaviors worse or you notice other changes in you child/student, contact a mental health professional for additional guidance and resources. It is important to note that some children may not demonstrate signs of suffering, or have a delay in onset of symptoms. Continue to talk with your child/student and keep lines of communication open.
Warning Signs of Risk for Suicide or Mental Health Crisis

» Excessive isolation or withdrawing from others
» Excessive or worsening anger, irritability, or frequent/extreme mood swings
» Loss of interest in areas previously enjoyed
» Giving away belongings
» Engaging in risk taking behaviors, behaving recklessly, and/or increase in use of substances
» Feelings of hopelessness or worthlessness
» Engaging in self harm/researching ways to harm themselves
» Being preoccupied with death in thoughts, conversation, writings, play, or drawings
» Showing rage or talking about seeking revenge
» Making comments such as “nothing matters,” “you won't have to worry about me much longer,” “everyone would be better off without me,” feeling like a burden/failure to others, having no reason to live or other similar sentiments. These may occur in person, online, or text
» Talking about wanting to die, “feeling trapped” or being in unbearable pain. This may occur in person, online, or text

Some warning signs may help determine if someone is at risk for suicide or has an increased mental health concern that needs immediate support from a mental health professional. If your child/student exhibits any of these signs, call 988 to reach the 988 Suicide & Crisis Lifeline, or seek immediate help from a mental health professional.

If you are worried about your child/student, be direct. Ask if they are having thoughts of suicide. If your child/student has thoughts or plans of self harm, harming others, or suicide, call 911, a crisis line or take your child to the nearest emergency room immediately. It is important to take all threats seriously and seek immediate treatment.

Contact social media outlets if you are concerned about a person's social media or dial 911 in an emergency. For guidance on how to contact specific social media platforms, visit: https://suicidepreventionlifeline.org/help-someone-else/safety-and-support-on-social-media/
Talking with Students the First Day Back

- Provide time for discussion both at the beginning of the day and as a debrief at the end of the day.
- Limit the amount of time for discussion to prevent fatigue. Although the length of the discussion may vary based on age, they should be no more than an hour and a half. Let students know that they can always revisit the conversation at a later time.
- Normalize children’s feelings and emotions.
- It may be helpful to share your own emotions as a model. You could say “I am feeling __________ today. What about you?”
- Consider using feelings pictures to help students articulate their emotions.
- Provide students who want them with paper and crayons/markers to draw how they are feeling or draw as they verbally process.
- Focus on small practical suggestions, such as what you can do to help them feel more in control now.
- Let students know it’s okay to cry.

There is no one-size-fits-all approach to supporting students after a traumatic event. The information below contains lessons learned from research on previous school shootings. However, it’s most important to let students know you are there for them however they need and encourage them to talk.

» Social support is important. Students are likely to want to talk with others who have had a similar experience to them

» Don’t force students to talk about the traumatic event. Rather, create space for those who may want to process how they are feeling

» Be mindful of what could be a trigger to students following a traumatic event. Certain sounds, smells, or images may bring back memories of the trauma

» Talk to leadership about creating a safe space in the school for students who need to decompress or have someone to talk to, or create one in your classroom. These spaces could contain fidget toys, counselors, therapy dogs, or other tools to reduce stress and anxiety

» Mindfulness and other exercises such as progressive muscle relaxation or diaphragmatic breathing can be used to help students better manage distress

» Remind students that it’s ok to be impacted in whatever way they are impacted. Comparing experiences may not be helpful

» Blanket debriefing strategies that force students to talk can interfere with the natural recovery process and cause harm
There are a number of stress management techniques teachers can use to support their students as they cope with a crisis. Some examples include progressive muscle relaxation, 5 finger breathing, diaphragmatic breathing, drawing exercises, and writing exercises. The following pages provide sample stress management techniques that should take less than five minutes to complete. However, feel free to use any preferred strategies.

5 Finger Breathing

1. Stretch one hand out so that you have space between your fingers.
2. Hold up your pointer finger from the other hand.
3. Start at the bottom of your thumb. Use your pointer finger to trace up your thumb as you slowly breathe in through your mouth.
4. When you get to the top of your thumb, slowly breathe out your nose as you trace down the other side.
5. Repeat for all fingers until you have traced your whole hand.
## Progressive Muscle Relaxation

### Whole Body Script

Using Restorative Practices

Post-crisis situations provide opportunities for students to examine their feelings as they rebuild their school community and put the pieces back together. Schools need to provide space for students to process and communicate their thoughts and feelings during a grieving process. Counselors, psychologists, and social workers recommend providing student opportunities to share in a restorative circle format.

Navigating restorative conversations involves self-reflection, language, vulnerability, and ground rules to allow for emotional conversations. These circles can include prompts or discussion starters to guide structure and consistency. The Crisis Prevention Institute advises to begin by letting students know that the crisis has impacted everyone. It is normal to have many different emotions and reactions - being scared, angry, shocked, guilty, or relieved. These emotions may change over a few days or weeks or last a while due to uncertainties. It is crucial to talk about how students feel while supporting one another in the process.

The purpose of the restorative circle is to allow students to know that they are supported. The restorative language uses “I” statements to remain nonjudgmental and allow the speaker to express feelings and describe how they were affected by the situation. “I” or affective statements, encourages ownership over one’s thoughts and feelings.

It is essential to ask thoughtful questions to validate your willingness to hear what others are thinking, feeling, and experiencing. Juliette Boewe, a school psychologist, recommends beginning with low-risk questions, and then gradually increasing to medium and high-risk questions.

Discussion Starters

» What has this been like for you?
» How have you been taking care of yourself?
» How have you been taking care of others?
» Where have you seen helpers?
» How can we support each other?
» How did you help your family during or after the disaster?
» How could you help your family if you were in another disaster?
» Did anything good or positive happen because of the disaster?
» Did you learn anything?
» What has this experience made you grateful for?
Crisis and Mental Health Resources

Find a Mental Health Provider:

Worried about a friend?

Know someone who is talking about or having thoughts of hurting themselves or others? Even though it can be scary, the best option is to reach out for help from an adult. Don't try to solve the problem on your own. You may have promised not to tell anyone, but this is a promise worth breaking. Tell a trusted adult right away, don't wait. This could be a school counselor, teacher or parent. Tell the person's parent or caregiver, if you think they will be helpful. Call the 988 Suicide & Crisis Lifeline, or 911. A professional will determine next steps to help keep your friend or others safe. Remember, don't wait, call immediately and ask for help!
